Why DoudouLinux matters

By Jean-Michel Philippe

DebConf 2013
11th to 18th August
Vaumarcus, Switzerland

This presentation is available online
on our website
Why DoudouLinux matters

1. DoudouLinux briefly
2. Technology as a Trojan horse
3. Controlling our minds
4. Inverted paradigm of robotics
5. Technology for small children
6. Brain wash marketing
7. How to succeed
8. DoudouLinux now
9. The future of the project
10. DoudouLinux and Debian
11. Working with Debian
1- DoudouLinux briefly

- Debian for children from 2
- Focused on children’s self-fulfillment
- Aids in mastering Technology, read our manifesto
- More than 40 language teams on Transifex
- More than 350,000 visitors on our website

“DoudouLinux reveals to children the creative, educative, cultural and fun potential that is lying dormant inside every computer.”
2- Technology as a Trojan horse

Nowadays technology is everywhere.

- In our pockets, our fridges, our cars, etc.
- Global spying system
- User profiling
- Spying on competitors (companies, states)
- Modern technology behaves like malware
3- Controlling our minds

Because we are entirely relying on technology.

- Aggressive advertising
- Centralized search engines
- Filtering bubbles
- The great toll booth of the entire humanity
- Information out of democratic control
- Loss of choices, of freedom
4- Inverted paradigm of robotics

We are becoming the robots of technology.

- 1984, Fahrenheit 451, etc., it’s now
- The Android logo is you
- Program or be programmed
- This is not our dreamed future but...
- Our future depends on what our children will accept or reject
5- Technology for small children

Children are targeted earlier and earlier.

- Gaming consoles, from 3
- Android, iOS tablets, from 3
- TV, from 2
- Designed to be addictive
- Profusion of digital entertainment
- Children stop learning skills
6- Brain wash marketing

Education starts from the earliest age.

- Mc Donalds® → children brain wash
- Nutella® → good memories of childhood
- We need Free software for children from 2 years on
- Linux should recall good memories
- Free software brain washing?
7- How to succeed

Let’s make free software, free devices that are...

- Attractive, nice and fun
- Easy as pie, like gaming consoles
- Good for children’s self-fulfillment
- Safe, secure and robust
- For children from 2

And highlight the difference!!!
DoudouLinux 2.0 was published in June.

- Easy interface rebuilt from ground up
- Graphics by a comics drawer
- Educative, creative, entertaining activities
- First set of digital, cultural contents
- Embedded web content filtering and blocking
- Browser homepage favors sister initiatives
- Easy for parents too
DoudouLinux is still starting out and is bursting with ideas!

- More creative activities
- More digital contents
- More programming activities
- Activities of cooperation between children
- Put computers back into the real world
- Develop a community of children
DoudouLinux and Debian

DoudouLinux wants to rely on a 100% community project.

- Be as close to Debian as possible
- Based on Debian Live
- Joined Debian Derivatives in 2011
- Started to revive Debian Junior in 2013
- Debian bug reports tagged doudoulinux
DoudouLinux can bring to Debian.

- Make Debian Junior closer to DoudouLinux
- Adopt nearly orphaned Debian packages
- Have our packages in the official Debian archive
- Share our patches with Debian and upstream
- Participate in Debian events?
